## **Tell me about the starter for a Chrysler 318 engine.**

Hello:

Attached are the two types of starters for your Chrysler 318 engine.  
I want to make sure we have the right direction.

The 2875927 starter is for a rear mounted starter on a CCW engine. The direction of the engine is from the back looking at the flywheel (LH)

The 2875928 starter is for a rear mounted starter on a CW engine. The direction of the engine is from the back looking at the flywheel (RH)

Most marine Chryslers have a rear mounted starter, meaning that the nose of the starter, faces the bow and the starter is behind the flywheel

Most non-Chrysler marine gas engines have a standard mount starter that the starter nose is towards the stern with the starter being under the block and in front of the flywheel.

Both of these starters are available. They are remanufactured ones from Alco (who may very well have made them for Chrysler back in the day)
