

# **Volvo Penta**

## **Is there a tool to remove impeller number 21700445?**

Hello:

As you are not the first person to ask this, I have written up a complete list for these tools and have sent it off to Stacy and Brian for inclusion on our website..

However, as of now, Volvo Penta does not offer a puller screw removal tool for the 21700445 impeller. We can supply you with an aftermarket puller at around \$125 which works well with a number of different impellers and has the added aspect that the impeller center does not have to be threaded.

Many people use vice grips and just ruin the old impeller.

Tool 3843947 puller screws is for the early Volvo Penta diesel engines KAMD32-KAMD44.

It is for impellers: 3841697, 21422647 and 2191356.

Tool 3843948 is for the later Volvo Penta D3 engines.

It is for impellers: 21951352, 3593660, 21381693 and 21951352

Tool 3843949 is for the later Volvo Penta TAMD61 - TAMD63P engines.

It is for impellers: 22994993 and 21951358.

Thank you for your question.

JD.
