

Volvo Penta

Where can I find parts for my SX-C outdrive?

Hello:

Your Volvo Penta SX Cobra was from the days of the joint venture between Volvo Penta and OMC. Although it was called an SX Cobra it was really a Volvo Penta SX-C drive.

While there are some internal and a few external differences between the SX-C and the SX-M drive, they are interchangeable so you can mix and match parts from the two drives relatively easily.

So we could sell you a new SX-M lower unit to fit on your SX-C drive, but the price for the lower unit is pretty steep.

It is better to just replace the whole SX-C drive with a new SX-M drive.

We do have a rebuilt SX-C lower unit that we are selling as well.

Thank you and please don't hesitate to contact us if you need any more information or would like to place an order.
