

Volvo Penta

I am looking for a gear set, part number 3858461.

This lower gear set is in a DPX-A or DPX-R which were drives that only lasted a couple of years. These drives were discontinued years ago (1998 or so) and as there were not many of them around parts are very difficult to find.

I don't think you will be able to find your gear set. You might be able to find a complete used lower unit (part number 3858743 1.47:1) but again it will be difficult.

You might want to consider changing over to a new drive. If you give me your engine and your actual drive type, I can quote you some options. But you are talking in the \$14K range I would think for a new transom shield and new drive (or maybe good used).
