

Volvo Penta

Bearing Cap Replacement Question

Hello Sir:

You can just replace the bearing cap on this engine. The bearing caps and the block side of the cap are machined together.

If you need to replace the bearing cap you have to line bore the crankshaft bearing caps. Volvo Penta does not sell the bearing caps separately. In Volvo Penta's view, if a bearing cap is bad (or spun which is what most times happens), the block is considered ruined.

I can supply you with a good used complete block (with all the bearing caps) for \$4,250.

I am sorry I can't give you better news.

J.D.
